

**Lazy Office Locator** is a mobile app that makes use of iBeacon technology to provide context to location. It sends notifications to the users as they enter or leave an area. The app also helps identify users of where they might be on the campus.

## Features

- Push custom notifications
- Identify locations on campus
- Fast response and beacon detection time (3 - 4 seconds)

**Use Case:** Instructors can use the app to see if the students are in the class or if they arrived late or not and how long they stayed there.
